

XAMPP

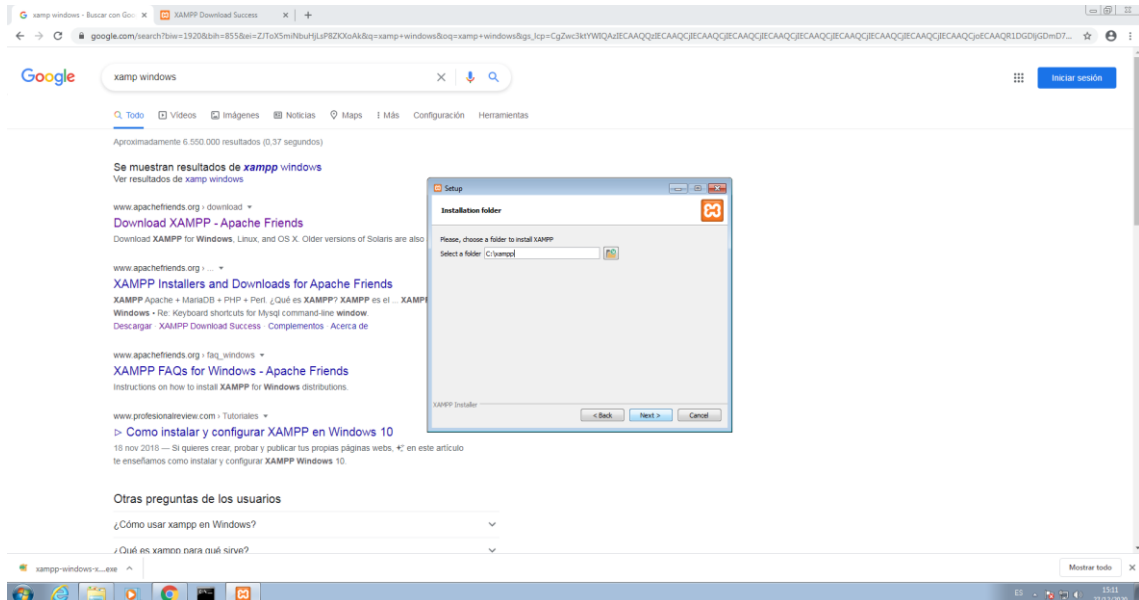

Lo primero de todo es necesario descargar el ejecutable del instalador de XAMPP para Windows. Una vez descargado lo ejecutamos

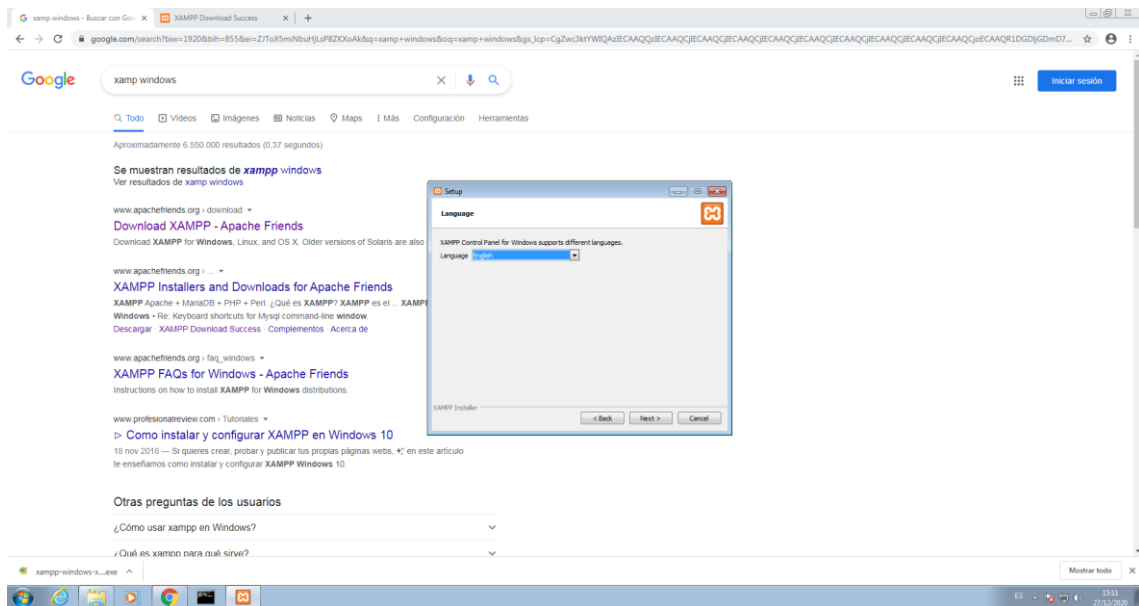

En opciones seleccionaremos MySQL, FileZilla y PHPMyAdmin

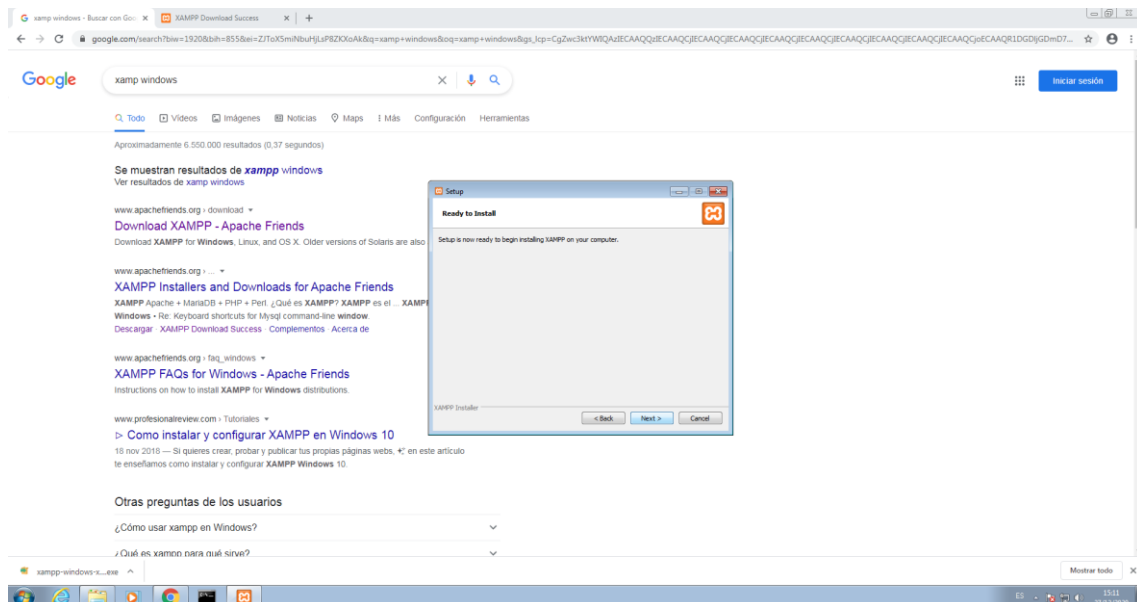

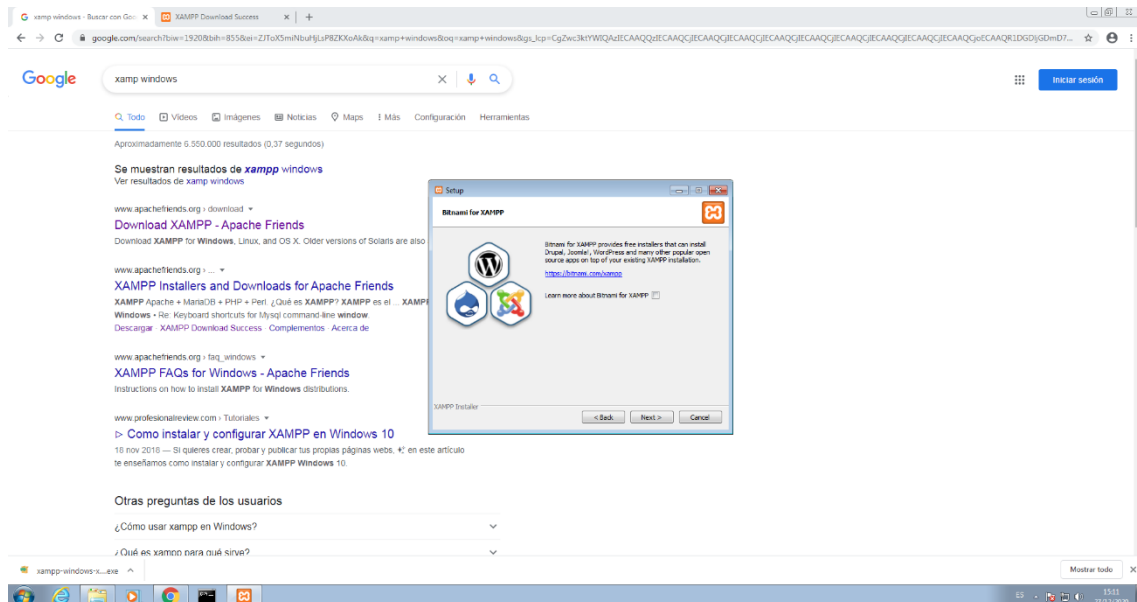

Seleccionamos la ubicación de la instalación

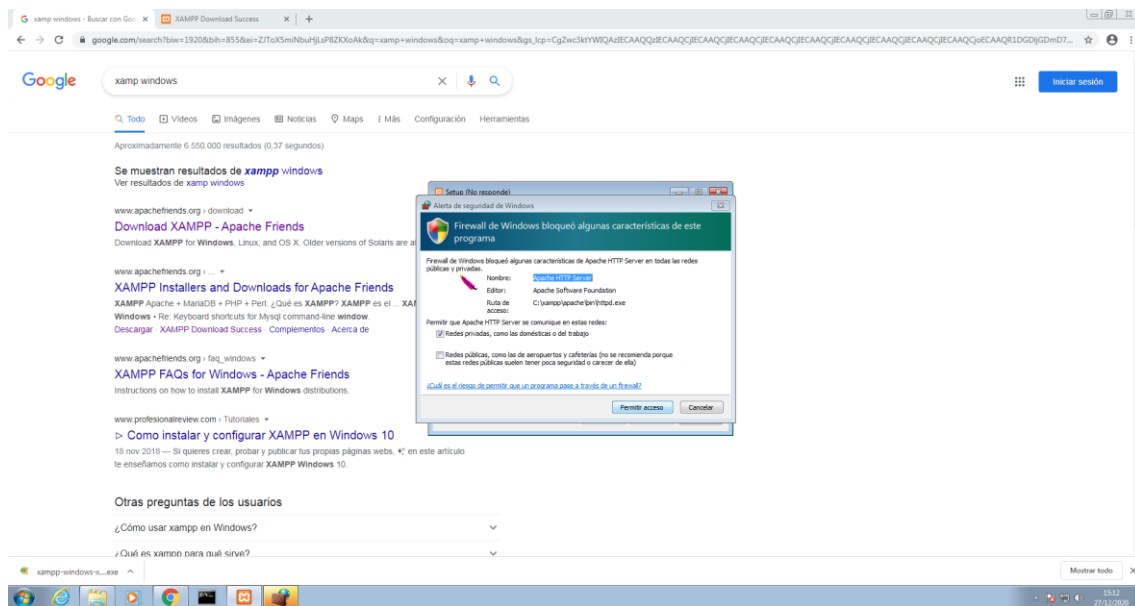

Lenguaje del XAMPP

En algún momento de la instalación saltará el firewall de Windows. Pulsamos en permitir

En que directorio se encuentra el fichero de configuración de apache -> En el lugar de instalación y dentro, en apache/conf, el archivo httpd.

DocumentRoot -> C:/xampp/htdocs (valor por defecto). Es el directorio de donde se obtendrán los archivos para mostrarlos.

Comprobación de funcionamiento desde cliente

Welcome to XAMPP for Windows 7.2.34

You have successfully installed XAMPP on this system! Now you can start using Apache, MariaDB, PHP and other components. You can find more info in the [FAQs](#) section or check the [HOW-TO Guides](#) for getting started with PHP applications.

XAMPP is meant only for development purposes. It has certain configuration settings that make it easy to develop locally but they are insecure if you want to have your installation accessible to others. If you want to have your XAMPP accessible from the internet, make sure you understand the implications and you checked the [FAQs](#) to learn how to protect your site. Alternatively you can use [WAMP](#), [MAMP](#) or [LAMP](#) which are similar packages which are more suitable for production.

Start the XAMPP Control Panel to check the server status.

Community

XAMPP has been around for more than 10 years – there is a huge community behind it. You can get involved by joining our [Forums](#), adding yourself to the [Mailing List](#), and liking us on [Facebook](#), following our exploits on [Twitter](#), or adding us to your [Google+](#) circles.
